10 Reasons you should convert to Union Fusion now

1. **Union Fusion is easily the most advanced Union Management system available, period.** "No", we are not exaggerating. In 11 years, this platform has an investment in development exceeding 15 million dollars. We have modules for the JATC, the Local <u>and</u> the fund office, that are designed to work together as a single enterprise data management system.

2. **We have integrated communication module.** We have partnered with Amazon simple Email and Twilio to provide three integrated forms of communication within the platform: email, SMS (texting), and Robo Calls. Imagine selecting all of your members in a moment and sending them a text blast to respond to a rally. By using our communication module, all communication is stored historically against the members record for future access.

3. **We Support 'integrated' CC processing and ACH transactions.** At nearly every union local we work with, organizations will use some separate merchant terminal to process dues through a swipe mechanism. Why not allow your members to process their own dues (24/7)? This saves the Local immense amount of time and energy avoiding the trap of double entering credit card transactions. We also support ACH (eCheck) transactions at a flat $1.50/transaction, irrespective of the size of the transaction.

4. **We Support an extremely mature student and class management system within the platform**. Ever notice how you and the JATC are not connected and not communicating with one another regarding member information, paid through date and other critical pieces of information? Why not have a single solution that works across your JATC AND your Local?

5. **We Support Remittance/Contributions management through new modules targeted to your Fund Offic**e. Contactors can log in and enter hours on their own. The system will auto-calculate the amount due for related funds. Integrated ACH payments allow your contractors to move large sums, securely and cheaply at only $1.50/transaction.

6. **Your Information is accessible 24/7 anywhere you have a device and an internet connection.** We have hosted with Amazon Web Services (AWS) for more than 8 years now. In all that time of hosting with Amazon, we have only experienced a grand total of 4 hours downtime. Security and uptime availability are their highest priorities and you reap the benefit.

7. **We now support a 'mobile compliant web view'.** You can now access information in a phone friendly manner with the new mobile view (option to each user) that was recently released. This makes finding people, adding notes and paying dues very easy on your mobile device.

8. **We Support a sophisticated, rule-based out of work list/referral hall.** Maintain a first in first out of work list that supports multiple complicated rule sets. The system will auto match existing member on the list against skill set and job order requests coming in from contractors. The system has an automated dialer connected that allow members to interact via phone.

9. **Multi organizational Support.** We support national level organizations that allow each organization (JATC / Local) to manage their respective data within their own space. The system allows for regional and national aggregation of data to support student or member counts across multiple organizations in a moment. National level administrators can easily move across multiple organizations as necessary in support of their trade members.

10. **We can preserve your historical data in your legacy system.** We have performed numerous data migrations for hundreds of organizations. Our database administrators are very adept at pulling information from older systems to support their preservation as you transition in our state of the art platform.
